

Water Traced Temperature Control Covers

Unique patented design made to install over flexible hose or other devices that require liquid heating or cooling.

- Protects temperature sensitive materials from the influence of the surrounding ambient
- Cover comes with water tubes and high efficiency insulation sewn into the assembly
- Includes water connection manifolds
- Saint Clair Systems provides automotive spec Heat/Cool units for supply and control of conditioned water

Typically used in cyclical flow systems, such as the adhesive dispense system shown on the robot at right. To achieve a stable viscosity, the temperature must be constant, even during periods of no flow.
